

MASTICARE™

A&L Laboratories introduces iodine-free MASTICARE™, the first and only teat dip/spray in the U.S. with revolutionary LSA® technology. Research shows MASTICARE kills all

known mastitis-causing organisms, including bacteria, viruses and fungi. MASTICARE comes ready to use and is available as a pre- and post-dip or spray disinfectant.

MASTICARE does not contain aggressive oxidizers, such as chlorine

bleach, chlorine dioxide or hydrogen peroxide. Instead, LSA technology features a synergistic complex of hydroxy acids, including salicylic acid, which is less irritating because of its anti-inflammatory properties.

Salicylic acid is oil-soluble so it penetrates skin pores better for more efficient exfoliation, plus MASTICARE'S 10% blend of proprietary skin conditioners promote quicker healing and prevent chapping and cracking in all weather conditions. The combined action (synergy) between salicylic acid and other organic hydroxy acids makes MASTICARE an extremely fast and powerful, yet gentle anti-microbial.

MASTICARE kills virtually on contact and keeps working, plus it has a vibrant green color that is easy to see, ensuring full coverage. With a Generally Recognized as Safe (GRAS) classification, MASTICARE has no residue concerns and comes ready to use with no mixing needed.

IMMUNOMODULATOR

Morinda Agriculture, Provo, Utah, has introduced MorindaMax™ Nutritional Support for Calves. The patented active ingredient in this all-natural product is
